Popmotion Plugin

Popmotion is a plugin that allows the developer to dress up an interface with interactive animation. The animations all consist of the user clicking on the animation and it moves in different motions.
I chose Popmotion, because I loved how interesting the animations were. I didn't have any experience with Javascript before attending FullSail University, so I was happy to be able to learn and experience how to create this cool animation. I know there is so much more to learn about it, but I am happy with what I have learned!
